  - Protection of hands:

    Protective gloves

    The glove material has to be impermeable and resistant to the product/ the substance/ the preparation. Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.

    Selection of the glove material should be based on consideration of the penetration times, rates of diffusion and the degradation

  - Material of gloves

    The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer.

  - Penetration time of glove material

    The exact break through time has to be determined by the manufacturer of the protective gloves and has to be observed.

  - Eye protection: Goggles recommended during refilling.
