     Protective gloves

     The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
     Due to missing tests no recommendation to the glove material can be given for the product/ the
     preparation/ the chemical mixture.
     Selection of the glove material should be based on consideration of the penetration times, rates of
     diffusion and the degradation
   · Material of gloves
     The selection of the suitable gloves does not only depend on the material, but also on further marks of
     quality and varies from manufacturer to manufacturer. As the product is a preparation of several
     substances, the resistance of the glove material can not be calculated in advance and has therefore to
     be checked prior to the application.
   · Penetration time of glove material
     The exact break through time has to be determined by the manufacturer of the protective gloves and
     has to be observed.
